

780 HIGH ACCURACY MULTI-WELL CALIBRATION SYSTEM:

Taking into consideration our immeasurable experience in Metrology, INSCO has developed the Ultimate Calibration Machine. Our 780 Model, also known as the "3 in 1" enables calibration labs to perform test at 3 different set points simultaneously with a single dry block.

Impressive Can you imagine having a reference points at -90C, another at 0C, and one at 1000C all in the same unit? This unit can cut down calibration time by 60%, saving valuable time and money.

The 780 series' design is so advanced that the unit's enclosure remains room temperature while operating. Stability in the 3 wells is obtained in just 40 minutes, while heating and cool-down periods are lower than the leading competitors, without the need of auxiliary devices. No other Dry Block manufacturer in the world can make this claim

Thanks to its advance modular design, all inserts can be custom ordered to meet your specific needs and applications. The unit is also provided with a traceable Certificate of Calibration, provided by one of our NVLAP Accredited Laboratories.

Key Features:

True Calibration

Portable Design

Stainless Steel Cabinet Standard

Stability Calibration Data provided for each unit
